Sampling Method

Soil samples should be taken using a 1/2 or 3/4 inch soil sampler or hollow tiner to a depth of 4-6 inches. Samples should be taken from different parts of the area in the shape of a W or S to give an overall reading. Please ensure the sample bag is filled to approx. 400g (a mug full) or just over, to enable us to complete a full analysis. Failure to do so will result in the sample being refused for testing by our laboratory.

**Table to be completed by soil testing laboratory.**

SAMPLE ORIGIN		pH	P	K	Mg	Comments or Recommendations
	mg/l					
	INDEX					
	mg/l
